NOTED BY: Alma Panganiban - Andal, MD - Unit Head

**UNFIT AND UNSAT FACILITY PERFORMANCE**

Summary	Breakdown	Count per Category	Ave. AOC per Category	Unsatisfactory Samples
<b>Total Samples: 35</b>	<b>Inborn Total:</b>	<b>35</b>	<b>3.72</b>	<b>Insufficient: 1</b>
<b>Average AOC: 3.72</b>	<b>Outborn Total:</b>	<b>0</b>	<b>0.00</b>	<b>Total Unsat Count: 1</b>
<b>Ave. Trans. Time: 3.60</b>	Homebirth:	0		<b>Total Unsat Rate: 2.86%</b>
	HOB Not Equals To HOC	0		
	Unknown:	0		

Your facility has reached **unacceptable** unfit and Unsatisfactory rate of 2.86%. Proper collection and complete demographic data is very crucial in the NBS process. Unsatisfactory samples are costly and may cause false positive or negative results. These may cause delay in the testing and diagnosis of an affected baby that could lead to possible irreversible damage.

We will conduct an unannounced facility visit to further inspect your process and address the issues to improve the NBS program implementation in your facility. The result of monitoring will be forwarded to Department of Health Regional Office for proper assessment.

REMEMBER: The goal is to have less than 1 percent (<1%) unfit / unsatisfactory rate!
